Disease resistance

Takii has a global melon development program, with many different varieties in key growing areas. Our focus is on taste, yield and achieving disease resistance. To ensure that our producers and customers experience the highest quality and most profitability.

Bulería F1
Galia Greenhouse

A shelf life melon recommended for the medium late greenhouse cultivation. Has a very good fruit setting and a vigorous plant. Small internal cavity. High sugar content.

TYPE GALIA | MARKET FRESH | MATURITY 75 DAYS |
HARVEST WINTER-SPRING | PLANT DENSITY 10,000 | FRUIT
WEIGHT 1.0-1.2 KG | FLESH COLOUR GREEN-WHITE |
RESISTANCES HR: Fom: 0,1,2/MNSV; IR: Px 1,2,5

Besodoble F1
Galia Greenhouse

One-time-harvesting melon. Has very uniform fruits with attractive yellow colour, high brix and good structure.

TYPE GALIA | MARKET FRESH | MATURITY 90 DAYS |
HARVEST WINTER-SPRING | PLANT DENSITY 10,000 |
FRUIT WEIGHT 1.0-1.2 KG | FLESH COLOUR YELLOW |
RESISTANCES HR: Fom 0,1/MNSV;
IR: Px 1,2,5

New

Jaleo F1
Galia Greenhouse

Suitable for greenhouse cultivation only. It sets easily and reaches 8 to 9 fruits per plant. Very suitable for export. Interesting for organic growers.

TYPE GALIA | MARKET FRESH | MATURITY 85 DAYS |
HARVEST WINTER-SPRING | PLANT DENSITY 8,000 |
FRUIT WEIGHT 1.0-1.2 KG | FLESH COLOUR YELLOW |
RESISTANCES HR: Fom 0,1,2/MNSV; IR: Px 1,2,5,3-5/Ag

New

Klimt F1
Galia Open Field

Long shelf life for transplanting from early-March to early-April (south of Spain). High productivity with several harvestings. High vigour plant. Highly recommended for organic and zero waste growing. Cultivation in open field.

TYPE GALIA | MARKET FRESH | MATURITY 85 DAYS |
HARVEST SPRING-SUMMER | PLANT DENSITY 10,000 | FRUIT
WEIGHT 1.0-1.2 KG | FRUIT SHAPE ROUND TO SEMI OBLONG
| RESISTANCES HR: Fom 0,1,2/MNSV;
IR: Px 1,2,5,3-5/Ag

Kalho

Cucumis melo

Excellent taste and aroma

Transplanting April

Harvest summer

Weight 1.0-1.2 kg

Kalho is the traditional Galia concept with an improved shelf life. The variety starts out green and changes to yellow when mature. The crop ripens very homogeneously with a nice round shape and the perfect size of 1 kg. This allows growers to easily harvest at optimum maturity. Kalho has good field standability with no peduncle detachment when mature. The variety performs very stable in the open field and produces well-balanced plants with small, dark green leaves. The aroma and taste are excellent and the sugar content is high.

Kalho F1
Galia Open Field

Intermediate shelf life Galia melon for transplanting from April (south of Spain). Round fruits that colour from dark green to yellow and nice netting.
TYPE GALIA | MARKET FRESH | MATURITY 85 DAYS | HARVEST SUMMER | PLANT DENSITY 10,000 | FRUIT WEIGHT 1.0-1.2 KG | FLESH COLOUR WHITE GREENISH | RESISTANCES HR: Fom 0,1,2/MNSV; IR: Px 1,2

Cabal F1
Galia Open Field

Very productive variety, stable and with a good vigour. Indicated for the medium season. The fruits have very good netting and the flesh shows a good internal structure, with small cavity and high sugar content.
TYPE GALIA | MARKET FRESH | MATURITY 80 DAYS | HARVEST SPRING-SUMMER | PLANT DENSITY 10,000 | FRUIT WEIGHT 1.0-1.2 KG | FLESH COLOUR YELLOW | RESISTANCES HR: Fom 0,1/MNSV; IR: Px 1,2,5

Akide F1
Galia

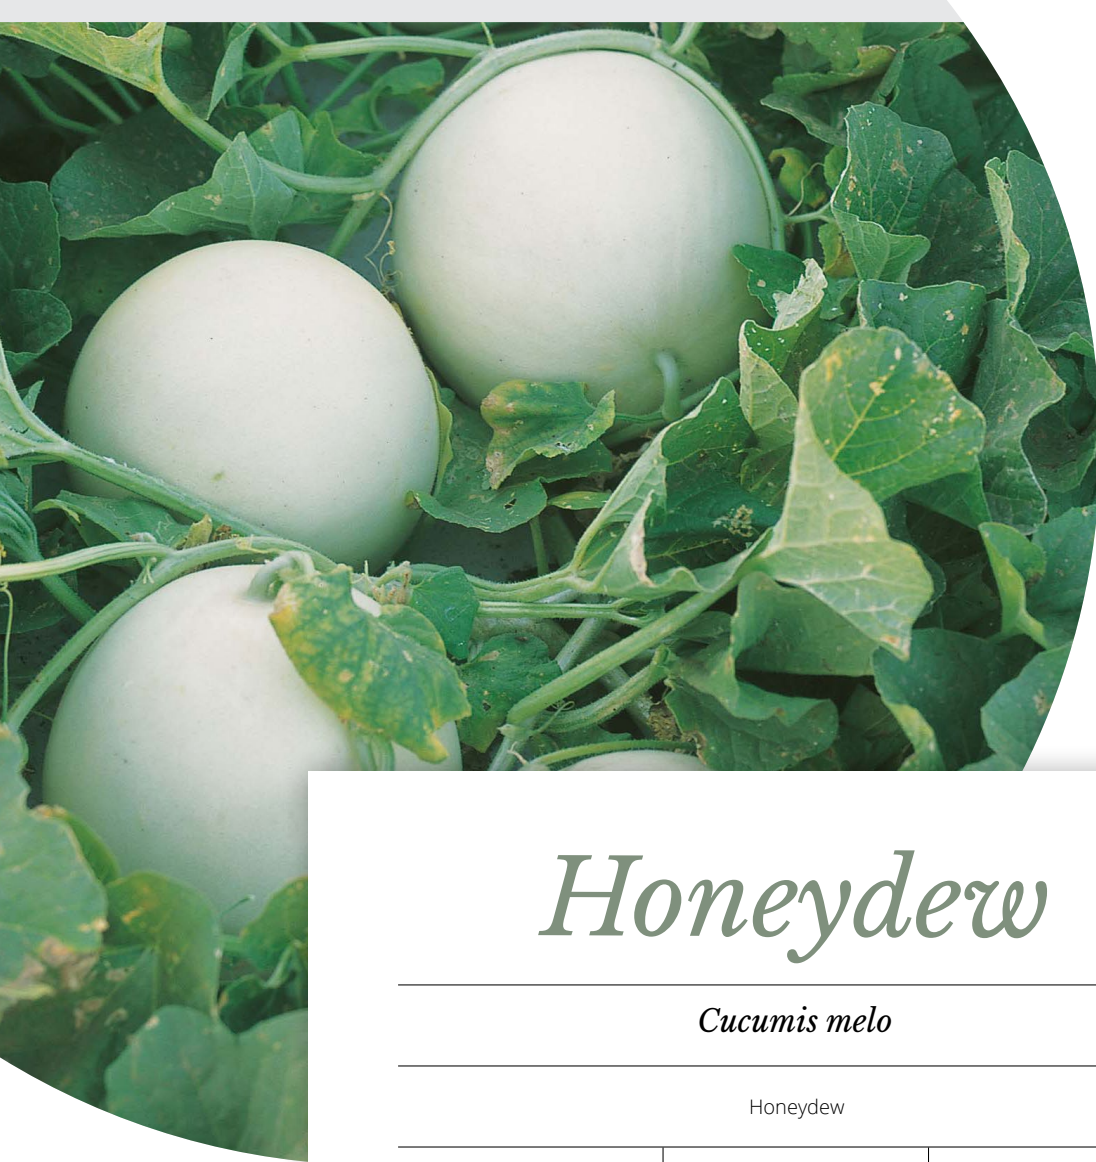

Consistent yields of high quality. Outstanding fruit quality. Good foliage cover against sunburn. Good taste and high brix.
TYPE GALIA | MARKET FRESH | MATURITY MEDIUM | HARVEST SPRING-SUMMER | PLANT DENSITY O.F. 6,500-8,000 / GH 3,500-4,500 | FRUIT WEIGHT 3.0-4.0 KG | FLESH COLOUR CREAM GREENISH | FRUIT SHAPE OVAL ROUND

"We develop tasty and productive melons. That is really important according to the market request."

*Senior Account & Product Manager
Jaime Dols*

Honeydew

Cucumis melo

Honeydew

Very sweet

Fresh crunchy flesh

Weight 2.5-3.0

This highly appreciated melon originates from the South of France and the North of Algeria. The melon is popular for its very sweet taste and juicy flesh. The crunchy flesh and the round fruits without netting, makes the melons very suitable for processing. No netting makes the melons easier to clean. The outer colour is also striking. At first it's green and when mature it becomes green/white, with orange or white flesh! Imagine cutting this melon open, be ready for a surprise.

Honeycomb F1
Honeydew

Honeycomb is known for its excellent fruit-setting ability. A strong, vigorous vine provides ample protection for the fruits. Slightly oval with a small seed cavity and very smooth skin. Very sweet (15 Brix).

TYPE HONEYDEW | MARKET PROCESSING, FRESH |
MATURITY 75 DAYS | HARVEST SPRING-SUMMER |
PLANT DENSITY 8,000 | FRUIT WEIGHT 2.5-3.0 KG |
FLESH COLOUR WHITE | RESISTANCES HR: Fom 0,2.

Summer Dream F1
Honeydew

Summer Dream has no netting, a short shelf life and is suitable for open field and tunnel cultivation. The skin colour is yellowish gray.

TYPE HONEYDEW | MARKET PROCESSING, FRESH |
MATURITY 80 DAYS | HARVEST SPRING-SUMMER |
PLANT DENSITY 8,000 | FRUIT WEIGHT 2.5-3.0 KG |
FLESH COLOUR ORANGE | RESISTANCES HR: Fom 0,2.

Watermelon

Citrullus lanatus L.

Triploid | Speciality | Crimson Sweet | Asian Stripe Mini

Delightful taste

Crispy flesh

Sweetness

Watermelon (*Citrullus vulgaris* or, as synonym, *Citrullus lanatus*) belongs to the Cucurbitaceae family.

It's a crop of sub-tropical African origin and very demanding in terms of sunlight and temperature as long as it's cultivated. Following the recommendations

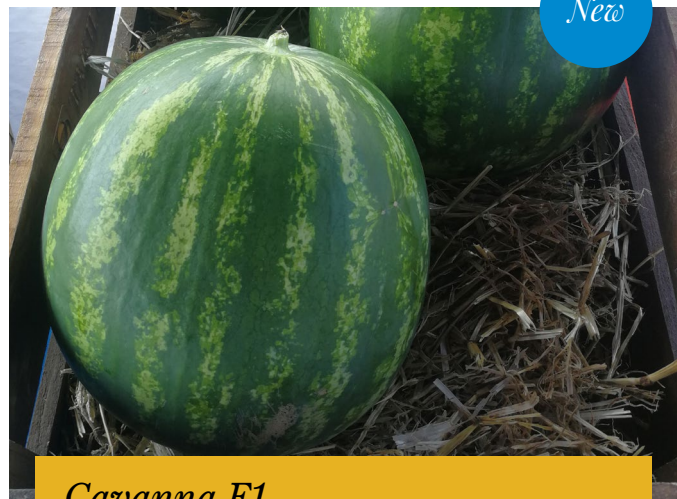

for basic temperature and soil fertilization, watermelon as a crop can develop very healthy and delight fruits with a high content of vitamins and microelements. Takii's watermelon breeding philosophy mainly focuses on characteristics such as; crispy flesh structure, delicious taste and sweetness.

Tresor F1
Triploid Asian Stripe Midi

Has a very good fruit setting and high productivity. Recommended for open field. Good shelf life and transportability. Very good internal structure and high brix. Can be combined with rootstock varieties.

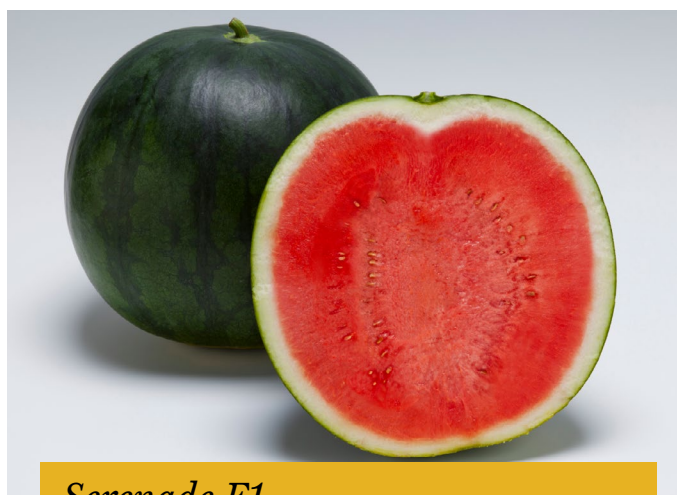

TYPE TRIPLOID ASIAN STRIPE MIDI | MARKET FRESH | MATURITY 75-85 DAYS | HARVEST SPRING-SUMMER | PLANT DENSITY 3,300 | FRUIT WEIGHT 3.5-4.5 KG | FLESH COLOUR RED | FRUIT SHAPE ROUND

Cavanna F1
Triploid Crimson Sweet Midi

Medium high vigour plant, suitable for grafting and fitting in the mid and late season for open field. It has a good fruit setting ability with round shaped fruits. Excellent taste with crunchy and nice red flesh, suitable for "double purpose".

TYPE CRIMSON SWEET | MARKET FRESH | MATURITY 90 DAYS | HARVEST SUMMER | PLANT DENSITY 3,300 | FRUIT WEIGHT 4.0-6.0 KG | FLESH COLOUR DARK GREEN | FRUIT SHAPE ROUND

Serenade F1
Triploid Sugar Baby Large

Recommended for greenhouse production. Also suitable for open field. Good shelf life and transportability. Very good internal structure and high brix. Can be combined with rootstock varieties.

TYPE TRIPLOID SUGAR BABY LARGE | MARKET FRESH | MATURITY 80-85 DAYS | HARVEST SPRING-SUMMER | PLANT DENSITY 3,300 | FRUIT WEIGHT 7.0 KG | FLESH COLOUR RED | FRUIT SHAPE ROUND

Luteo F1

Citrullus lanatus L.

Yellow flesh | fine quality | high yield

Type diploid speciality

Harvest summer

Market fresh

Luteo is a high yielding variety due to its flowering and fruit setting combined with its fine quality of yellow flesh. A unique product in the personal size segment. Luteo has a very attractive skin with Asian stripes, bright yellow crispy flesh and a sweet taste.

Minerva F1
Diploid Crimson Sweet Medium

Easy growing plant with early fruit setting. High brix and crispy structure. Recommended for supermarket sales.

TYPE DIPLOID CRIMSON SWEET MEDIUM | MARKET FRESH
| MATURITY 80 DAYS | HARVEST SUMMER | PLANT
DENSITY 3.300 | FRUIT WEIGHT 7-10 KG | FLESH COLOUR
DEEP RED | FRUIT SHAPE ROUND TO OBLONG

Amphion F1
Diploid Crimson Sweet Large

Early productive variety and develops vigorously. The fruit has a very good taste and high sugar content. Recommended to grow without rootstock only.

TYPE DIPLOID CRIMSON SWEET LARGE | MARKET FRESH |
MATURITY 80 DAYS | HARVEST SUMMER | PLANT DENSITY
3,300 | FRUIT WEIGHT 10-12 KG | FLESH COLOUR DEEP
RED | FRUIT SHAPE OBLONG

Scorpius F1
Diploid Crimson Sweet Large

Easy setting, well balanced and high yielding plant, that gives a uniform production. Grown in open field or mini tunnel. Dark green striped fruits. Deep red flesh colour. Sweet and juicy.

TYPE DIPLOID CRIMSON SWEET LARGE | MARKET FRESH
| MATURITY 75 DAYS | HARVEST SUMMER | PLANT
DENSITY 3,300 | FRUIT WEIGHT 10-12 KG | FRUIT SHAPE
OBLONG | FLESH COLOUR DEEP RED

Colt F1
Diploid Crimson Sweet Large

Good fruit coverage. Concentrated flowering and fruit setting. Large fruits with wide and dark stripes. Crunchy and fiberless red flesh. High sugar content. Good transportability and long shelf life.

TYPE DIPLOID CRIMSON SWEET LARGE | MARKET
FRESH | MATURITY 72 DAYS | HARVEST SUMMER |
PLANT DENSITY 3,300 | FRUIT WEIGHT 8-10 KG | FLESH
COLOUR RED | FRUIT SHAPE ROUND OVAL

Colt F1

Citrullus lanatus L.

Balanced | Large fruits | Crunchy and fiberless

<i>Type</i> Diploid Crimson Sweet Large	<i>Harvest</i> summer	<i>Market</i> fresh
--	-----------------------	---------------------

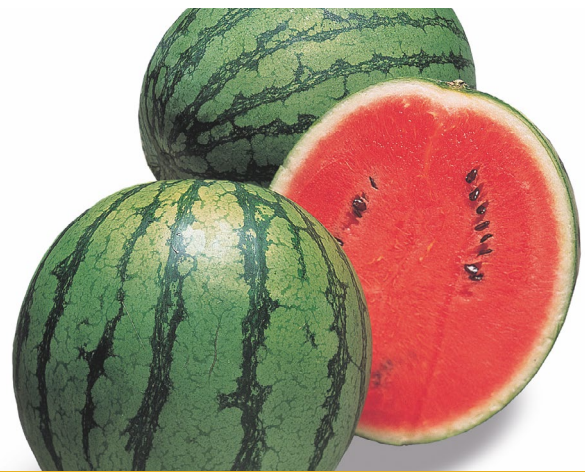

Colt has a very healthy balanced plant with good fruit coverage. It has concentrated flowering and fruit setting and develops large fruits with wide and dark stripes. When taking a bite, you'll experience the sweet taste of the crunchy and fiberless beautiful red flesh. The fruits remain their freshness with long shelf life and good transportability.

Dulzor F1
Diploid Sugar Baby

Diploid Sugar Baby type with early maturity, easy to grow and recommended for protected cultivation. Very high fruit quality with uniform internal colour, high brix and excellent crispy structure and taste.

TYPE DIPLOID SUGAR BABY | MARKET FRESH | MATURITY 75-85 DAYS | HARVEST SUMMER | PLANT DENSITY 3,300 | FRUIT WEIGHT 5.0-6.0 KG | FLESH COLOUR RED | FRUIT SHAPE ROUND TO SLIGHTLY ELONGATED.

Ingrid F1
Diploid Asian Stripe Mini

Striped mini watermelon with medium plant vigour and high production. High sugar content with attractive bite (internal structure). Strong against cracking with excellent keeping quality. High brix (12-13). Also recommended as pollinator.

TYPE DIPLOID ASIAN STRIPE MINI | MARKET FRESH | MATURITY 65 DAYS | HARVEST SUMMER | PLANT DENSITY 3,300 | FRUIT WEIGHT 2-3 KG | FLESH COLOUR RED | FRUIT SHAPE ROUND OVAL

Luteo F1
Diploid Speciality

Yellow fleshed watermelon. Crispy structure and very sweet, medium-small sized fruit with good fruit setting. Good shipping and shelf-life. Oval shaped with dark green stripes.

TYPE SPECIALITY | MARKET FRESH | MATURITY 65 DAYS | HARVEST SUMMER | PLANT DENSITY 3,300 | FRUIT WEIGHT 1.5-2.0 KG | FLESH COLOUR BRIGHT YELLOW | FRUIT SHAPE OVAL
